

Ticket ID	Alert Message	Severity	Details	Ticket status
A-2703	SERVER-MAIL Phishing attempt possible download of malware	Medium	The user may have opened a malicious email and opened attachments or clicked links.	Escalated ▾

Ticket comments
An alert triggered indicating an employee received a phishing email, downloaded, and executed a malicious attachment. Initial analysis identified multiple suspicious indicators, including sender address discrepancies (Display Name: "Def Communications", Email Body Sign-off: "Clyde West", Sender Address: 76tguyhh6tgftrt7tg.su) and grammatical errors throughout the email text. The email included a password-protected attachment named bfsvc.exe (password: paradise10789) that was downloaded and run on the victim's endpoint. Hash comparison verified that bfsvc.exe matches a known malicious payload. Based on the confirmed execution of malware on the target host, this medium-severity incident has been escalated to Tier 2 SOC for immediate containment and remediation.

Additional information

Known malicious file hash:
